

Static vs. Dynamic Routing

David Starr

@elegantcoder

ElegantCode.com

We asked each other: “What would it look like if we built the router using the patterns we teach in our workshops?”

Ryan Florence & Michael Jackson – Co-Creators of React Router

Routing Styles

Static Routing

Each route is defined up front

Routes are declared as part of application initialization

Routes are loaded before rendering occurs

Nest routes through hierarchical declaration

Dynamic Routing

Routes may be discovered and executed at runtime

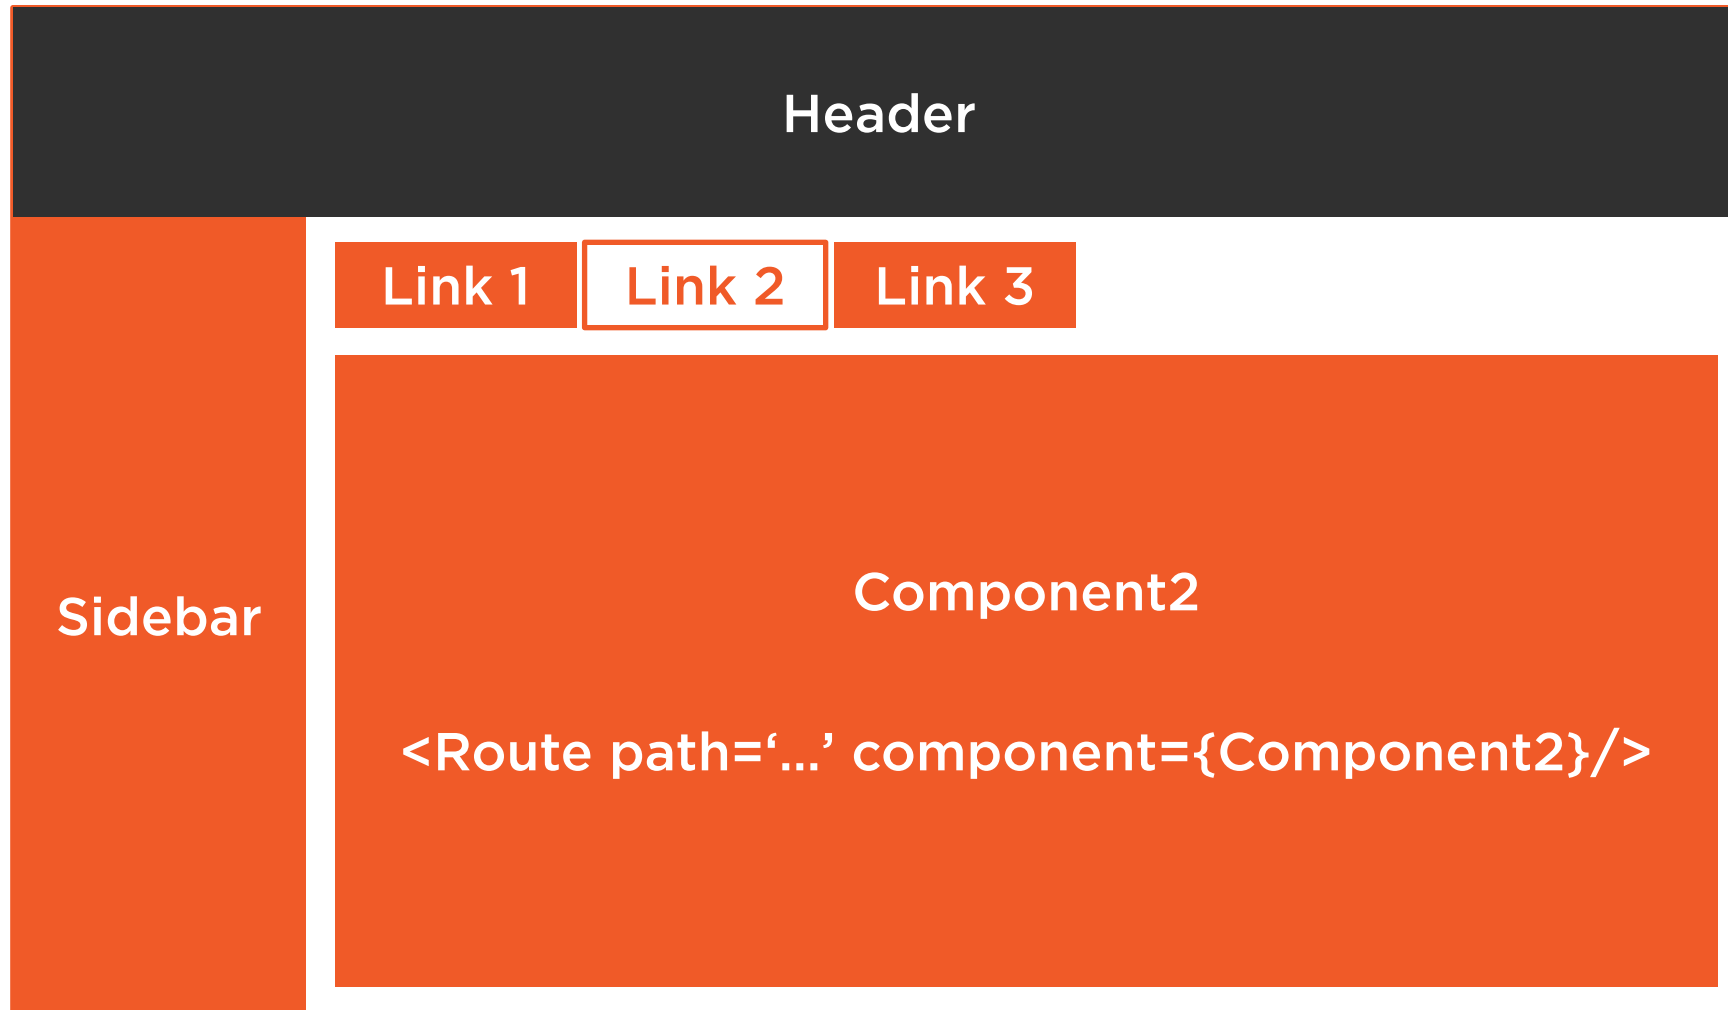

Routes are rendered like any other component

Nest routes with pattern matching

Routes are just components

Dynamic Routing in React

Demo

Dynamic routing

Summary

Static routing

Dynamic routing

Routes as components
